

13° FEBRUARY 2025

How to boost your plant productivity, safety and sustainability with first principle simulation and AI

Cristina Peretti, Principal Consultant Presales - AVEVA

AVEVA

AVEVA is a leader in sustainable industrial platforms and software

- AVEVA combines the world-leading industrial data management with AI-infused software that builds on more than fifty years of expertise
- Schneider Electric 100% shareholder and strategic partner
- Growing recurring revenue by 10%+
- Cloud growth accelerating
- Market capitalization > US \$9BN
- Revenue > US \$1.2BN

Our **vision** for the future

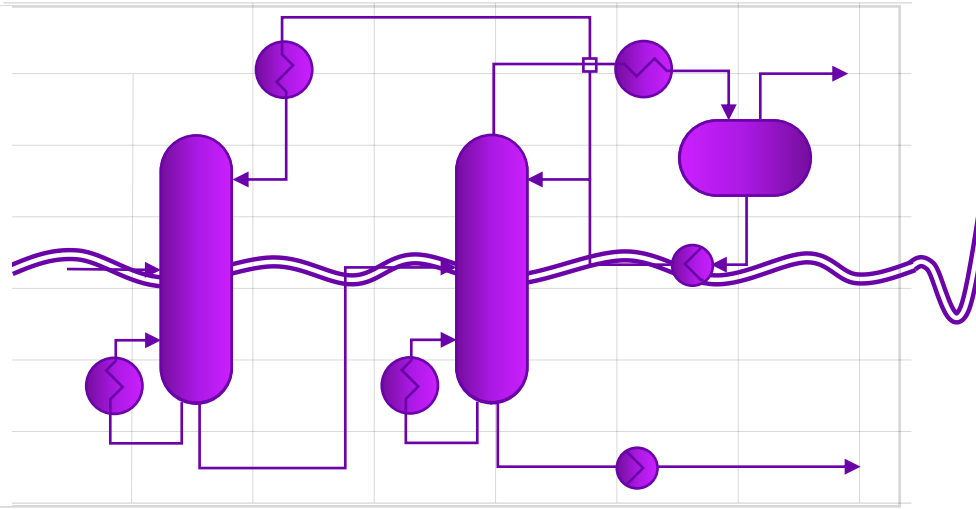

We spark industrial ingenuity

By connecting people with trusted
information and insights

To drive responsible use of the
world's resources

Problem Statement

Several days of
production are lost
every year

The plant is changing feed weekly
It takes the operators 8 hours to
stabilize back the plant

Can AI help?

Crude Compositions to Handle

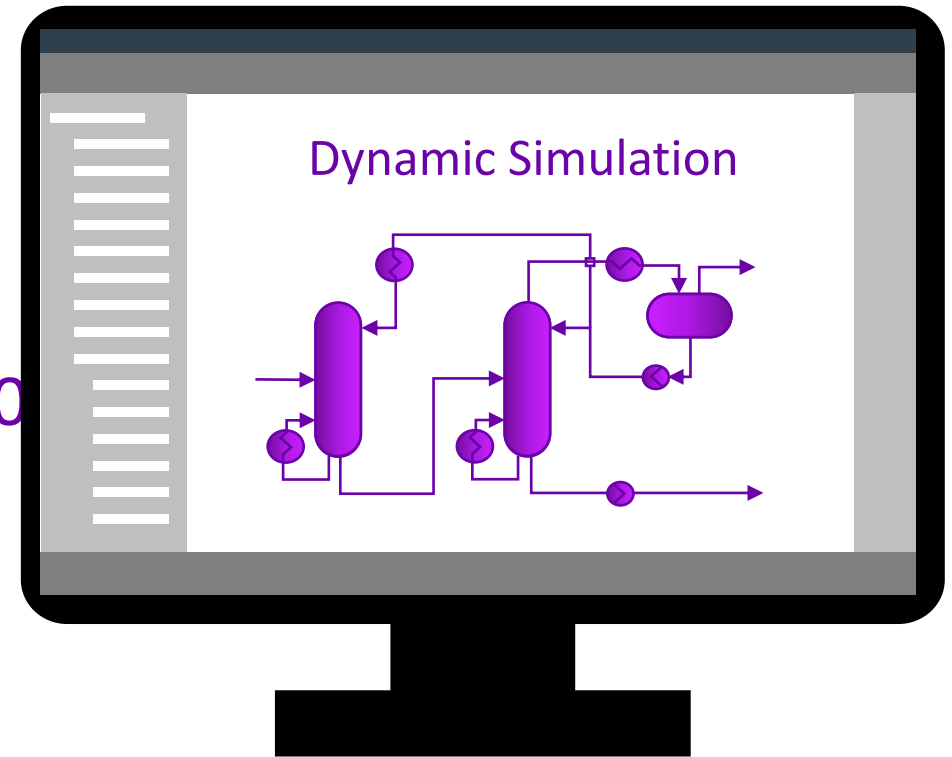

Runs to Train and Validate the AI Agent

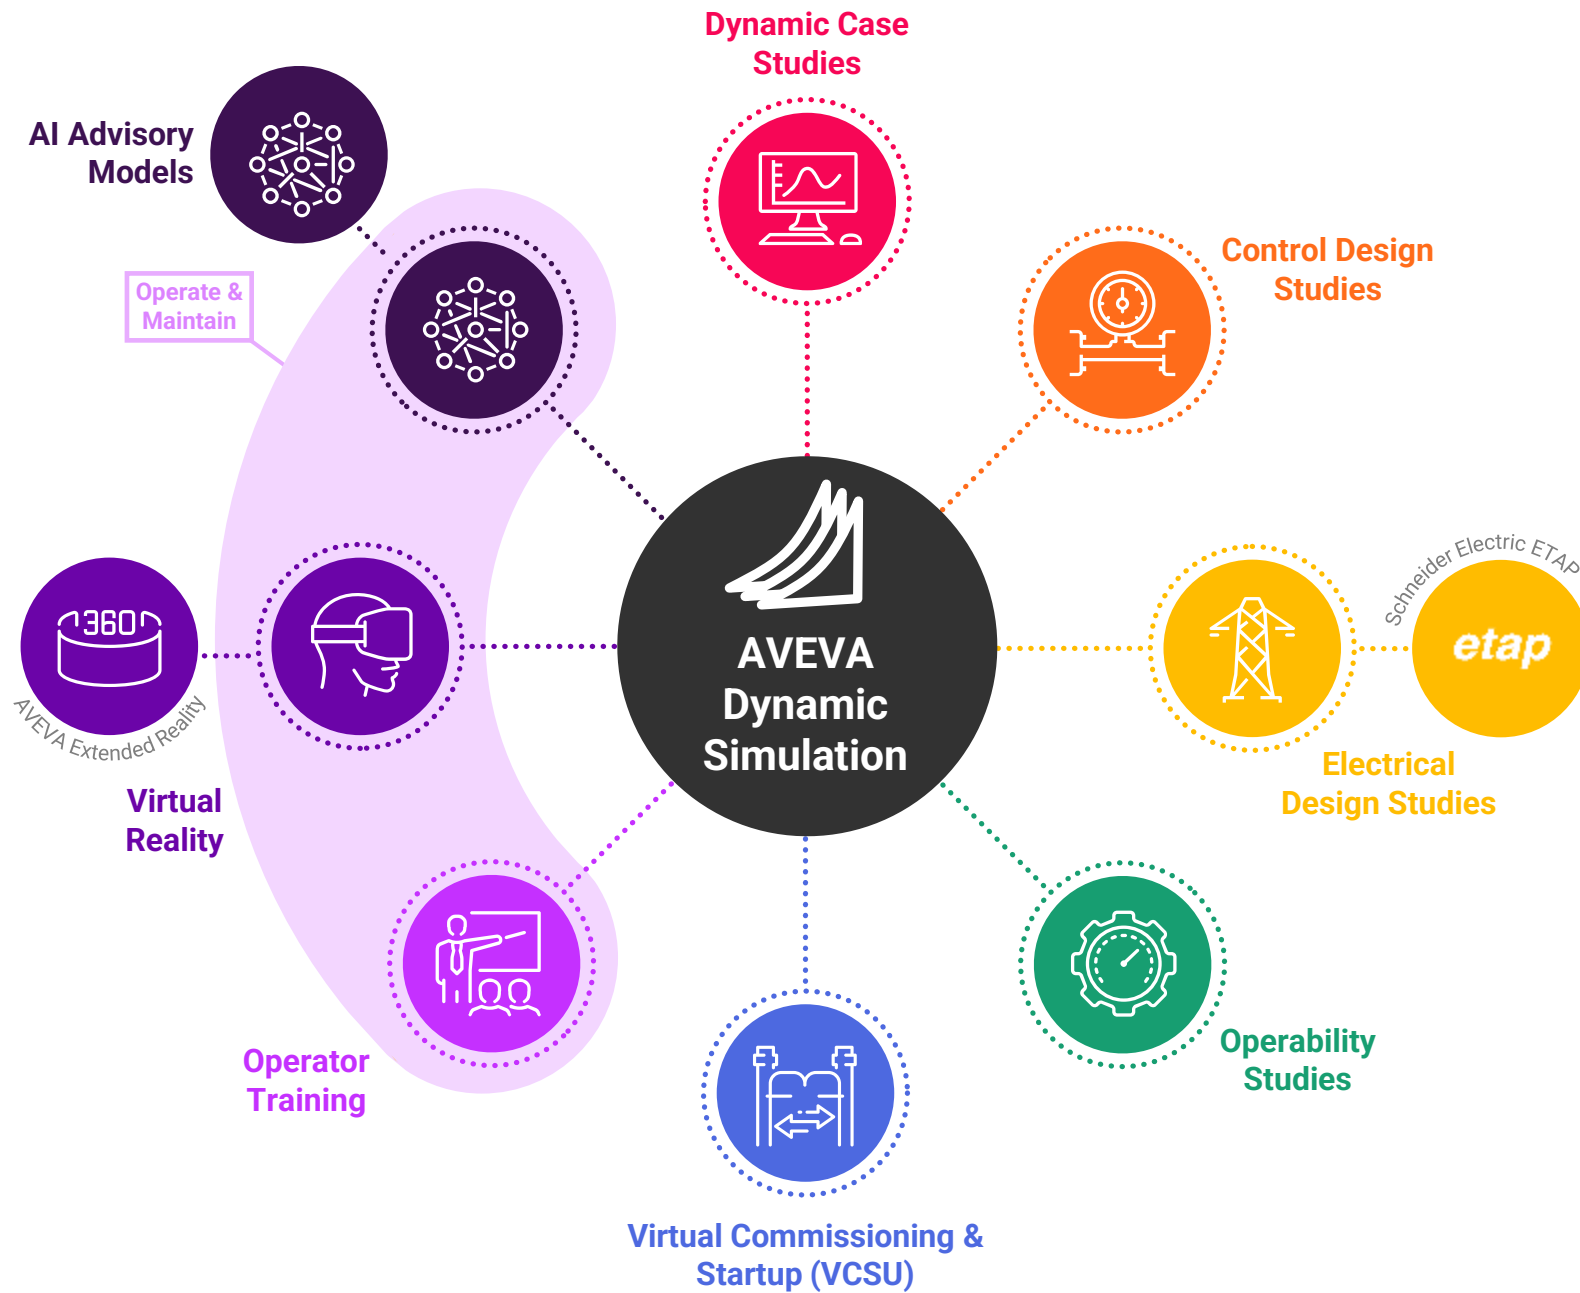

Can AI help?

It will take **580** years to collect the required data for training the AI agent using only plant data

LC101 RESPONSE

Color	Name	Value	Units	Custom Description	Min	Max
Blue	LC101.SP	0.390000	m	Set point	0.3	0.5
Green	LC101.OUT	0.097561	fraction	Output	0.0	1.0
Red	LC101.PV	0.390263	m	Process variable measurement	0.3	0.5

LC101 Dynamic response

DYNAMIC RESPONSE

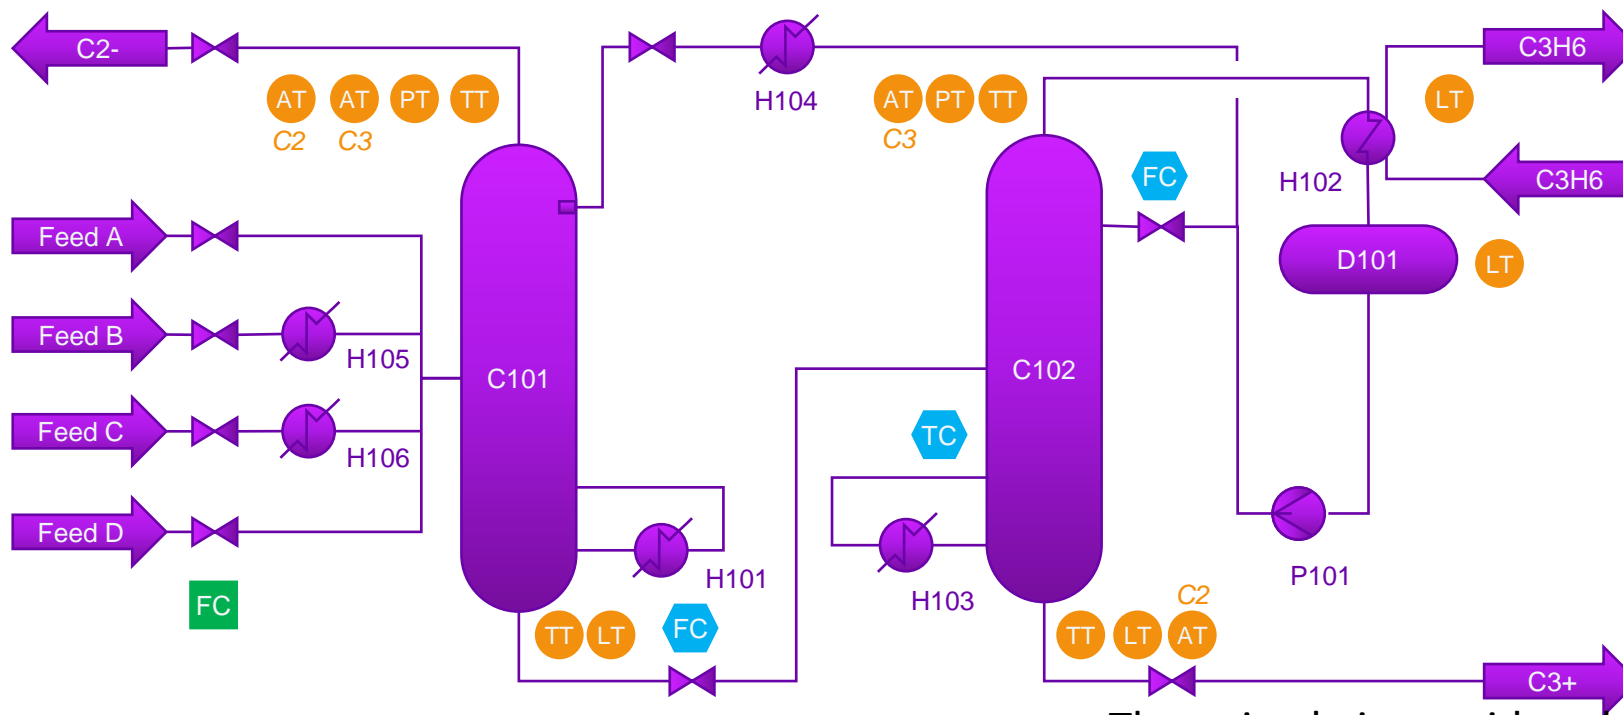

Color	Name	Value	Units	Custom Description	Min	Max
Blue	S9.W	1.04009	kg/sec	Reflux flow rate	0.984	1.044
Green	S6.W	1.49156	kg/sec	Top product flow rate	1.478	1.498
Red	S13.W	0.713933	kg/sec	Steam flow rate	0.702	0.722
Purple	S17.W	2.27271	kg/sec	Bottom product flow rate	2.262	2.292

The Process Digital Twin meets AI

With just **15 clones** it took **41 days** to collect the equivalent amount of data of **580 years**

Problem definition

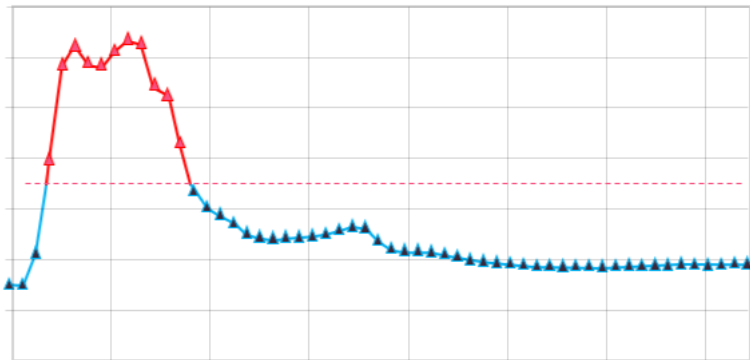

The objective is to stabilize the unit after a change in the raw feed condensate (Feed D) in the lowest time possible

The AI agent can change the setpoint of the C101 bottom flow rate, C102 reflux flow rate and C102 temperature

The episode is considered successfully completed when all 14 key process variables are stabilized (fluctuations drop below 2% of their range) and no alarm is triggered during the operation

- Initial Change
- FC Raw Condensates Feed
- ⬡ Action Space
 - ⬡ FC C102 reflux flow controller (set point)
 - ⬡ FC C101 bottom flow controller (set point)
 - ⬡ TC C102 temperature controller (set point)
- Observation Space
 - TT C101 top temperature
 - TT C101 bottom temperature
 - PT C101 top pressure
 - AT C101 top C3 concentration
 - AT C101 top C2 concentration
 - LT C101 level
 - TT C102 top temperature
 - TT C102 bottom temperature
 - PT C102 top pressure
 - AT C102 top C3 concentration
 - AT C102 bottom C2 concentration
 - LT C102 level
 - LT H102 level
 - LT D101 level

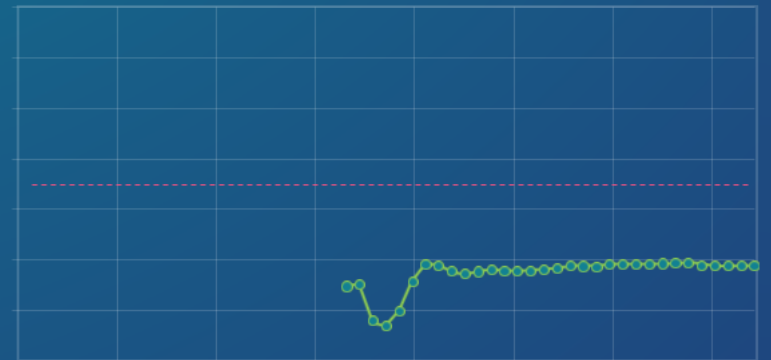

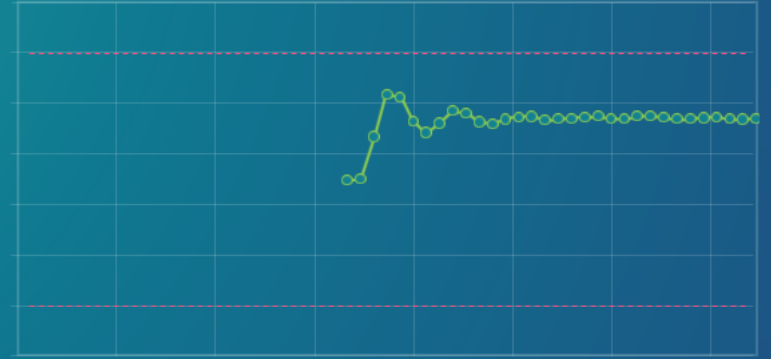

Human

VS

AI Agent

What are the benefits?

25%

Less Time for Completing the Operation

2

Additional Days of Production in One Year

Problem Statement and Solution

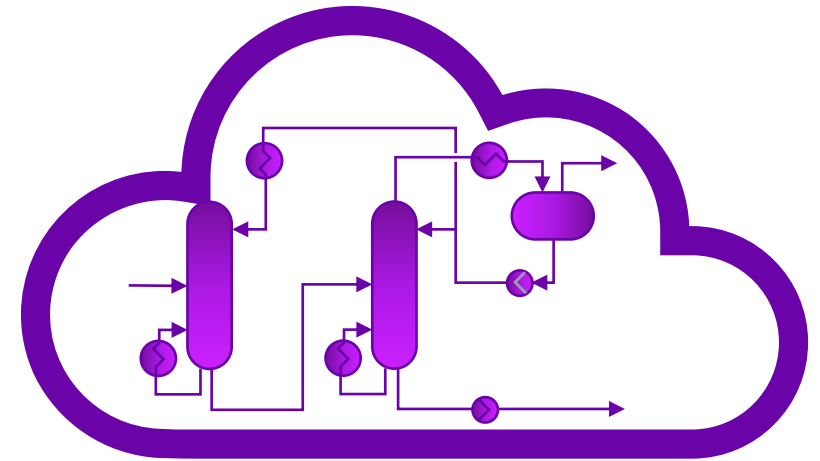

The plant is changing feed weekly

It takes the operators 8 hours to stabilize back the plant

Several days of production are lost every year

HOW CAN WE IMPROVE?

AI agent can be trained to optimize the operation using a digital replica of the plant on the cloud

Takeaways

This work demonstrates the benefits of using in the same workflow **first-principles models, AI and cloud** to achieve:

Higher
profitability

45% time
saved

Improved
stability

Plant **stabilized**
faster

Improved
safety

No alarm
triggered

Higher
sustainability

Emissions can be
minimized

ABOUT AVEVA

AVEVA is a world leader in industrial software, providing engineering and operational solutions across multiple industries, including oil and gas, chemical, pharmaceutical, power and utilities, marine, renewables, and food and beverage. Our agnostic and open architecture helps organizations design, build, operate, maintain and optimize the complete lifecycle of complex industrial assets, from production plants and offshore platforms to manufactured consumer goods.

Over 20,000 enterprises in over 100 countries rely on AVEVA to help them deliver life's essentials: safe and reliable energy, food, medicines, infrastructure and more. By connecting people with trusted information and AI-enriched insights, AVEVA enables teams to engineer efficiently and optimize operations, driving growth and sustainability.

Named as one of the world's most innovative companies, AVEVA supports customers with open solutions and the expertise of more than 6,400 employees, 5,000 partners and 5,700 certified developers. The company is headquartered in Cambridge, UK.
